Priority recommendations

1. **P0** — Remove the typosquatted `com.fastxml.jackson.core:jackson-databind` dependency entirely (dependency-confusion attack vector; does not resolve on Central and was only reachable via a blocked, untrusted plain-HTTP mirror).
2. **P0** — Upgrade `log4j-core / log4j-api` 2.14.1 → 2.17.1 (Log4Shell CVE-2021-44228, CVSS 10.0, actively exploited in the wild; actually used in `DiscountCalculator`).
3. **P1** — Upgrade `jackson-databind` 2.9.8 → at least 2.9.10.8 (ideally the current 2.x/3.x line) — 53 known CVEs, 16 rated CRITICAL (9.8) deserialization RCEs.
4. **P1** — Upgrade `mysql-connector-java` 8.0.30 → 8.0.33 (CVE-2023-22102) **and** resolve the GPL-2.0-with-FOSS-exception license policy violation (legal review or swap to a permissively-licensed driver).
5. **P1** — Upgrade transitive `protobuf-java` 3.19.4 → 3.25.5 (pulled in via `mysql-connector-java` ; 4 HIGH CVEs).
6. **P2** — Upgrade `guava` 24.1.1-jre → 32.0.0-jre+ (CVE-2023-2976 insecure temp-dir, CVE-2020-8908); expect a major-version review.
7. **P3** — Routine bumps: `commons-io` → 2.14.0+, `commons-lang3` → 3.18.0+, `jackson-annotations` → 2.9.10+.
