Supply-chain alerts

CRITICAL — Typosquatted dependency. `com.fastxml.jackson.core:jackson-databind:2.9.8` impersonates the legitimate `com.fasterxml.jackson.core` (groupId missing "er"). The coordinate does not exist on Maven Central. Maven 3.8+ blocks resolution but the declaration is still a supply-chain confusion vector. **Remove immediately.**

HIGH — Insecure repository source. `http://insecure-mirror.example.net/maven2` is declared in `pom.xml` and served over plain HTTP. An attacker with network access can substitute arbitrary artifacts via MITM. Maven 3.8 default HTTP-blocker currently prevents resolution, but the declaration must be removed.

CVE detail — log4j-core 2.14.1 (Log4Shell)

CRITICAL — Log4Shell (CVE-2021-44228, CVSS 10.0). Remote code execution via JNDI lookup injected into log messages. One of the most severe vulnerabilities in Java ecosystem history. Any application passing attacker-controlled strings to a log4j logger is exploitable. `DiscountCalculator.java` uses `LogManager.getLogger()` directly in the invoice/payment service. Upgrade to 2.17.2 immediately.

CVE detail — jackson-databind 2.9.8 (54 CVEs)

CRITICAL — Unsafe deserialization gadget chains (jackson-databind 2.9.8). Fifty-four CVEs affect this artifact, including 14 CRITICAL-rated remote code execution vulnerabilities enabled by polymorphic type handling (`enableDefaultTyping`). The entire 2.9.x line reached end-of-life in 2021. Upgrade to 2.14.0 or later.
